

Test Documentation for Registration and Login page of Rokomari.com

Rokomari.com is a Bangladeshi e-commerce site. It officially launched on 19 January 2012. Initially, it started selling only books, but now sells DVD, video tutorial, sporting goods, calculator, watch, pen drive, computer accessories and more. Being a popular online bookselling website in Bangladesh, it is expected to have almost no bugs in its registration and login pages. However, I thought of manually testing its registration and login pages to verify every feature and started working on it in order to develop my test case writing and test execution skills.

Here is a summary of my test report:

Login Page:

Pass	13
Fail	0
Warning	1
Total	14

Registration Page:

Pass	14
Fail	2
Warning	1
Total	17

The bugs I would like to report with emphasize are that the phone number section in the registration page is taking any number input from less than 5 characters to greater than 15 characters. I even did background researching of international phone numbers in google and found that phone numbers can not be less than 5 and more than 15 numbers. Where the phone number section in Rokomari.com's registration page was open to any number of numeric inputs. Moreover, there was no country code selecting feature.

By completing and working on this project I have developed skills in Test Planning, Designing, Writing and Reviewing Test Cases, Test Execution and Evaluation, Creating Test Report and Bug reporting.

This was a wonderful experience for me as the assignment gave me the opportunity to explore and test the already established website's login and registration forms and I got to improve my bug finding analytics and write proper documentation for the test cases. In future I will work on more projects like this to improve my manual testing skills.

Thank you for reading my Test report Documentation
